USGBC Colorado Announces Publication Date for LEED 2009 Building Design & Construction Study Guide

Best selling LEED AP study guide to be released November 6, 2009

DENVER, CO, October 5, 2009 – The U.S. Green Building Council Colorado Chapter will release the **newest version of its LEED Professional Accreditation Study Guide & Practice Exam on November 6, 2009**. The new version of USGBC Colorado’s internationally acclaimed publication will provide valuable information, tools, and practice exams for individuals sitting for the Green Building Certification Institute’s (GBCI) new LEED 2009 Building Design and Construction credentials.

“One great resource that I cannot recommend enough is the study guide put together by the USGBC Colorado Chapter,” wrote a green building professional on Archinet.com. “I do not think I would have passed on my first try without this guide.”

USGBC Colorado published its first study guide in 2002, the result of a successful partnership between the organization and the author, Timothy Moore of Whole Systems Design. Since then, the guide published by USGBC Colorado has gained an international following, based entirely on its reputation as the best study guide for LEED AP candidates.

“The key (to passing the AP exam) is to read the Colorado Study Guide first, before reading the Reference Guide,” said one LEED AP successful candidate. “It breaks down the materials into easier to digest chapters, and it gives a good general background to the LEED Rating System.”

The new USGBC Colorado LEED Professional Accreditation Study Guide & Practice Exam for LEED 2009 Building Design & Construction will be available for purchase at www.usgbccolorado.org on November 6, 2009. Discounts are available for members of USGBC Chapters, USGBC National Member Companies, and bulk purchases.

“USGBC Colorado has helped literally thousands of green building professionals gain their LEED credentials,” said Deb Kleinman, Executive Director of the U.S. Green Building Council Colorado. “We are excited to continue to work with the green building community around the world to train professionals and to transform our built environment.”
